

Summary of Strengths

- A result oriented professional with 2.3 years of experience in application development, Enhancement and service delivery in web and content based industries.
- Insightful knowledge of Java, J2EE technologies, SPRING-Core, SPRING-MVC and SPRING-Boot Frameworks and front end Technologies – Angular4 and 6.
- Strong exposure to AGILE software development methodology and processes.
- Resourceful in taking up challenging and complex development/enhancements.
- Excellent problem solving, communication and analytical skills, able to follow through with projects from Inception to completion.
- A strong goal-oriented team player with high degree of technical adoptability.

Summary of Qualification

- Attended Training program at Hexaware Technologies in Java and Angular 4.
- 1.9 years of experience as Full stack developer in TechMahindra pvt. Ltd.

Computer Proficiency

Technology	: Java, J2EE, XSLT
Operating System	: Windows Server2012 R2(AWS EC2 Instance), Windows 2016
RDBMS/DBMS	: MySQL, Oracle Developer
Development Tools	: Eclipse IDE, Spring Tool Suite
Framework	: Spring Core, SpringMVC, Spring-Boot, Angular
Repositories	: GIT, maven
Web Development	: JavaScript, Angular 4, 6, 8, Content Management System

Professional Summary

Project #1

<i>Title</i>	Common Document Management Application
<i>Operating System</i>	Windows Server 2016
<i>Technology</i>	Spring Boot, Angular 6
<i>Team Size</i>	2
<i>Role</i>	Team Member
<i>Period</i>	August 2018 – February 2020

Project Description

Cornerstone web application acts as a generic platform to make Content Management Activities. It is designed to perform various operations on the document management system i.e., GE -Box. Cornerstone application is a rich user interface that connects with the Box server which stores huge volumes of document. This user interface is completely build on Angular6 technology and the server component is developed on Spring Boot. Cornerstone UI is designed to do multiple operations like Corptax upload, Deal Upload, Corptax Search,

Invoices Search, HFS Search, GEC search, Reports Search and cornerstone search, Lockbox Search etc. The application has an Admin user interface to manage user and create a set of permissions for each user and also manages the groups. The user can login into the system and create folders and upload the documents. Also versioning is maintained for the uploaded documents and the users can search the document and download its content.

The Application was highly useful and appraised by business teams.

Role and Responsibilities

- User login and Authentication using SAML Single Sign On.
- Developed UI Screens for Search and Upload (Multi file upload) with the metadata related to documents.
- Developed several UI functionalities to allow user Download, delete the document based on the roles of the user.
- Developed the UI functionalities which allows the Application owner to Add the user and assign the role to the user.
- Developed Rest services using spring boot to Upload the Multipart file to Box using BoxAPI and update the document metadata to the SQL Server Database.
- Deployment Rest Services to Add the User, remove and Alter the user responsibilities.
- Developed Rest services to Search, download and delete the documents from the BOX.
- Developed many Backend utilities like CashMedia, Cash WireInjection and Invoice Archival, which has various sources of inputs from Banks and Leasewave, which will process the documents and metadata and upload to box using the core rest services
- Developed a Queue Implementation Utility where the request comes to a JMS Queue, based on the type of request the metadata of the contract will be updated in database.
- Added enhancements to the application based on the user request like, exporting the search result to an excel and Email the desired documents.
- Automated the monitoring of the application where if a document upload failed, team gets an email alert.
- Scheduled the batch jobs to run daily/weekly based on the Clients request.

Project #2

<i>Title</i>	Employee Leave Management Application
<i>Operating System</i>	Windows 7, Windows Server 2008
<i>Technology</i>	Java, MySql, Angular 4
<i>Team Size</i>	4
<i>Role</i>	Team Member
<i>Period</i>	January 2018 – April 2018

Project Description

It's a PeopleSoft application where the employee can view his details along with their current leave balance, which cannot go negative, he also can view his manager details, who is also an employee. Employees can apply for leave in this portal. These leave applications go to their manager for approval. The manager can approve or deny the leave application. At any time, an employee can see his/her applications and their statuses.

Role and Responsibilities

- Developed UI components and services using Angular 4 framework, where user can view his details, Apply for leave.
- Developed UI components and services for a Manager role to view his employees' leave requests and Approve/Deny.
- Developed backend services using Core Java, for the above functionalities (MySQL)
- Testing of the backend services using Junit and JMockit.

Testing of the Angular components using Karma and Jasmine frameworks.

Educational Qualification

- ❖ B.Tech from Vasireddy venkatadri institute of Technology affiliated to JNTU-Kakinada with aggregate of 71.33% in the year 2017
- ❖ Intermediate, from State Board with aggregate of 94.00% in the year 2013.
- ❖ 10th Standard, from State Board with aggregate of 91.33% in the year 2011.
